## GROW BAG FROM USED FLEX

A majority of the city's roads, finally rid of the eyesore that is flex and banners, have been transformed giving passers-by a clear view of seasonal flowers and trees.

In today's scenario, the advertising industry has been growing in a bigger manner with the aid of modern technology. High quality printing and canvassing is now possible and cheaply available as „Digital Flex Banners“. People are so crazy in displaying huge size banners as their invitation for their occasions. It has also become a symbol of prestige. But, the cheap, readily available flex banners are the pure source of environmental hazards if they are not disposed properly. The resulting consequences from improper disposal of such flex banners are intolerable to the surrounding environment and human health.

Grow bags are portable and lightweight options to grow plants, vegetables and micro-greens. Haseena V trained NSS unit Volunteers to design grow bags from thrown flex sheets. Grow bags were used to grow vegetables by which plastics will be reused. Aim of this work is to explore and develop the basic eco-friendly recycling methodologies for polluting Flex banners waste.
