ORGANIC FARMING

Organic farming is a production system which avoids or largely excludes the use of synthetically compounded fertilizers, pesticides, growth regulators, genetically modified organisms and livestock food additives. Organic farming is one way to promote either self-sufficiency or food security. It promotes and enhances agro-ecosystem health, including biodiversity, biological cycles, and soil biological activity is hence important. Many studies have shown that organic farming methods can produce even higher yields than conventional methods.

In our college CALICUT University Syndicate Member Prof. N.V Abdurahman inaugurated the harvest of organic farming 'VILAVELP'. Seedlings were distributed to volunteers, staff members, to the natives of the adopted village, in order to promote organic farming. Moreover, a vegetable garden was planted in the U.P School.
